Data Fusion: Concepts and Ideas H B Mitchell

This textbook provides a comprehensive introduction to the concepts and idea of multisensor data fusion. It is an extensively revised second edition of the author's successful book: "Multi-Sensor Data Fusion: An Introduction" which was originally published by Springer-Verlag in 2007.

The main changes in the new book are:

New Material: Apart from one new chapter there are approximately 30 new sections, 50 new examples and 100 new references. At the same time, material which is out-of-date has been eliminated and the remaining text has been rewritten for added clarity. Altogether, the new book is nearly 70 pages longer than the original book.

Matlab code: Where appropriate we have given details of Matlab code which may be downloaded from the worldwide web. In a few places, where such code is not readily available, we have included Matlab code in the body of the text.

Layout. The layout and typography has been revised. Examples and Matlab code now appear on a gray background for easy identification and advanced material is marked with an asterisk.

The book is intended to be self-contained. No previous knowledge of multi-sensor data fusion is assumed, although some familiarity with the basic tools of linear algebra, calculus and simple probability is recommended.

Although conceptually simple, the study of multi-sensor data fusion presents challenges that are unique within the education of the electrical engineer or computer scientist. To become competent in the field the student must become familiar with tools taken from a wide range of diverse subjects including: neural networks, signal processing, statistical estimation, tracking algorithms, computer vision and control theory. All too often, the student views multi-sensor data fusion as a miscellaneous assortment of different processes which bear no relationship to each other. In contrast, in this book the processes are unified by using a common statistical framework. As a consequence, the underlying pattern of relationships that exists between the different methodologies is made evident.

The book is illustrated with many real-life examples taken from a diverse range of applications and contains an extensive list of modern references.

From reader reviews:

Esther Price:

Here thing why that Data Fusion: Concepts and Ideas are different and reputable to be yours. First of all examining a book is good nonetheless it depends in the content from it which is the content is as delightful as food or not. Data Fusion: Concepts and Ideas giving you information deeper and in different ways, you can find any e-book out there but there is no reserve that similar with Data Fusion: Concepts and Ideas. It gives you thrill looking at journey, its open up your own eyes about the thing in which happened in the world which is maybe can be happened around you. It is possible to bring everywhere like in playground, café, or even in your approach home by train. For anyone who is having difficulties in bringing the branded book maybe the form of Data Fusion: Concepts and Ideas in e-book can be your alternative.

Andrew Meadows:

Hey guys, do you desires to finds a new book to learn? May be the book with the concept Data Fusion: Concepts and Ideas suitable to you? The actual book was written by well-known writer in this era. The actual book untitled Data Fusion: Concepts and Ideas is one of several books this everyone read now. This book was inspired many people in the world. When you read this publication you will enter the new age that you ever know prior to. The author explained their strategy in the simple way, consequently all of people can easily to comprehend the core of this reserve. This book will give you a lots of information about this world now. So you can see the represented of the world within this book.

David Munsch:

Is it an individual who having spare time in that case spend it whole day by simply watching television programs or just laying on the bed? Do you need something totally new? This Data Fusion: Concepts and Ideas can be the solution, oh how comes? The new book you know. You are so out of date, spending your free time by reading in this brand-new era is common not a nerd activity. So what these publications have than the others?

Virgie Tauber:

What is your hobby? Have you heard that question when you got students? We believe that that question was given by teacher on their students. Many kinds of hobby, All people has different hobby. Therefore you know that little person including reading or as reading through become their hobby. You need to know that reading is very important and book as to be the point. Book is important thing to increase you knowledge, except your teacher or lecturer. You find good news or update concerning something by book. Amount types of books that can you choose to use be your object. One of them is this Data Fusion: Concepts and Ideas.
