—*PaleoAnthropology*, 2009 Issue

The First Edition of *Biological Anthropology of the Human Skeleton* is the market-leading reference and textbook on the scientific analysis of human skeletal remains recovered from archaeological sites. Now, featuring scores of new or thoroughly revised content, this Second Edition provides the most comprehensive and up-to-date coverage of the topic available.

Like the previous edition, this *Second Edition* is organized into five parts with contributing chapters written by experts in the field of human skeletal biology: Part One covers theory and application; Part Two discusses morphological analyses of bone, teeth, and age changes; Part Three reviews prehistoric health and disease; Part Four examines chemical and genetic analysis of hard tissues; and Part Five closes with coverage of quantitative methods and population studies. Each chapter includes a review of recent studies, descriptions of analytical techniques and underlying assumptions, theory, methodological advances, and speculation about future research.

New or thoroughly revised content includes:

- Techniques in the analysis of human skeletal and dental remains
- Extensive coverage of new technologies, including modern morphometric techniques
- Advances in the field of forensic anthropology
- Enhanced discussion of ethical terms regarding the study of aboriginal peoples' remains where those people are no longer the dominant culture

This book serves as an indispensable research guide to biological anthropologists, osteologists, paleoanthropologists, and archaeologists. Now with a stronger focus on teaching complex material to students, this revised edition provides enhanced case studies and discussions for future directions, making it an invaluable textbook for advanced undergraduates and graduate students in biological anthropology and forensic anthropology programs.
