Hazardous Industrial Waste Treatment Lawrence K. Wang, Yung-Tse Hung, Howard H. Lo, Constantine Yapijakis

Increasing demand on industrial capacity has, as an unintended consequence, produced an accompanying increase in harmful and hazardous wastes. Derived from the second edition of the popular Handbook of Industrial and Hazardous Wastes Treatment, Hazardous Industrial Waste Treatment outlines the fundamentals and latest developments in hazardous waste treatment in various process industries, such as metal finishing, photographic processing, wood treatment, and explosives. Comprehensive in scope, the book provides information that is directly applicable to daily waste management problems throughout the industry.

The book contains in-depth discussions of environmental pollution sources, waste characteristics, control technologies, management strategies, facility innovations, process alternatives, costs, case histories, effluent standards, and future trends for the process industry. It includes extensive bibliographies for each type of industrial process waste treatment or practice, invaluable information to anyone who needs to trace, follow, duplicate, or improve on a specific process waste treatment practice.

A quick scan of the chapters and contributors reveals the depth and breadth of the book's coverage. Hazardous Industrial Waste Treatment provides technical and economical information on how to develop the most feasible total environmental control program that can benefit both industry and local municipalities.
